

We pioneer motion

JUST LIKE NEW

Schaeffler Remanufacturing

Many bearings are replaced before reaching the end of their operating life. But it doesn't have to be that way. Remanufacturing can refurbish medium-sized and large rolling bearings and restore them to as-new condition.

BENEFITS*

Regardless of manufacturer, across all sectors, worldwide

With in-depth knowledge, decades of experience, and the skills you can only get from a maker of rolling bearings, we remanufacture bearings on every continent.

**Same
quality**

**Lower
costs**

**Faster
availability**

**Improved
sustainability**

* Compared to buying a new bearing

SERVICE

Four-stage process of bearing remanufacturing

Different work processes are required depending on the condition of the bearing. An assessment is needed in order to determine exactly what work will be required.

- Level I** – Requalifying
- Level II** – Refurbishment
- Level III** – Remanufacturing
- Level IV** – Remanufacturing plus

The bearings are then greased – if required – as well as assembled, preserved, and repacked.

BEARINGS

These bearings can be remanufactured

In general, rolling bearings with an inside diameter of 80 mm or more can be remanufactured.
